

Video Game Controllers of the Ages - Flash

Contributed by Adam Robert Clegg

While I do have skills and experience with flash, my academic and freelance experiences thus far have not produced an example suitable for use in an online portfolio. As such, I created the following Flash site project to demonstrate that I do possess some flash ability. "Video Game Controllers of the Ages" details a very truncated history in the progression of input devices for video games from the perspective of one who has been playing them for most of his life. The site is broken up according to the video game console "generations" and covers what big advancements in control were implemented in each "generation." So without further ado, I give Video Game Controllers of the Ages .
